

iCorps SaaS Protect

Cloud-to-Cloud Data Backup

An astonishing 1-in-3 companies report losing data stored in cloud applications. While services like Microsoft 365 and Google Cloud offer high availability platforms, there are no native backup capabilities. Independent cloud backups help protect your data from malware damage or ransomware attacks, end-user mistakes, and external application errors. [iCorps SaaS Protect](#) restores your SaaS data in minutes, providing:

- **Point-in-Time Backups** - Backups include snapshots of data, taken 3 times per day. Restore entire accounts to predesignated settings.
- **Infinite Retention** - Store an unlimited amount of data in private cloud, purpose-built for backup for no additional fees.
- **Help Meeting Compliance Requirements** - Data retention is not considered a backup if you have a requirement to maintain digital records for a period of time.

iCorps SaaS Protect covers both Microsoft 365 and Google Cloud data. For Microsoft 365 users, SaaS Protect backs up OneDrive, SharePoint Online, mail, contacts, and calendars. For users of Google Cloud, SaaS Protect covers Google Drive, Gmail, site, contacts, and calendars.

About iCorps

iCorps Technologies, a leading IT Consulting, Managed Services and Cloud Computing Company, provides strategic leadership, innovative services, and hands-on expertise to businesses of all sizes. An industry pioneer, the iCorps team guides some of the fastest growing organizations and collaborates with hundreds of clients to help transform their businesses – while delivering exceptional results.

KEY BENEFITS

COST EFFECTIVE

Simply pay a one-time provisioning cost and a flat monthly fee based on users, not volume of data.

BUSINESS CONTINUITY

Quickly restore data without serious downtime, overwriting existing files, or site collections targeted at the same URL.

STREAMLINED RECOVERY

SaaS Protect ensures smooth data recovery after user errors, malicious activity, or provider outage.
