

Managed Detection and Response

Holistic MDR for ALL endpoints with human expertise

Gone are the days where antivirus software and firewalls are enough to protect your business from cyber attacks.

Threats that target networks, endpoints, and data are evolving every day - and need your attention in order for your business to thrive.

iCorps MDR is a proactive, comprehensive and powerful tool for the defendable cybersecurity program your business needs. Human expertise combined with artificial intelligence, machine learning, and behavioral analytics identifies attacks and stops them in their tracks.

Why iCorps MDR?

Reduced alert fatigue

24/7 protection

Enhanced security posture

Fast & actionable incident response

Enhanced Visibility

iCorps' MDR platform provides a holistic view of network and endpoint activity, as well as the threat landscape by collecting and correlating data from various sources. This enables businesses to detect anomalies, suspicious behaviors, and indicators of compromise that might otherwise go unnoticed.

Cost Savings

Businesses can reduce the costs associated with cybersecurity by eliminating the noise of needless alerts. Each alert is reviewed for its threat level and categorized before iCorps is alerted. This weeds out false on non-actionable alerts, saving the client time and money.

Human Expertise

iCorps' MDR sorts through the white noise and provides actionable, responsive and timely service where and when it matters most. We combine human expertise, advanced technology, and threat intelligence to monitor networks, endpoints, clouds, and IoT devices for any signs of malicious activity.
