

iCorps Network Integration

Network Solutions that Drive Innovation

Whether you're building your network from the ground up, or need a specific network service, iCorps offers flexible infrastructure solutions. Our network consultants design for security, scalability, and reliability, to support your business' changing needs. They can help with corporate relocations, network design and deployment, procurement, continuity and remote solutions, security, and compliance management. We use a five-step methodology to find the best solutions for your business:

STEP #1 - ASSESS

Our 360° assessment outlines your current computing environment, pain points, and future business goals.

STEP #2 - RECOMMEND

Our networks experts provide detailed recommendations including a plan, network map, objectives, and list of action items.

STEP #3 - IMPLEMENT

Our team handles the strategic planning, design, procurement, consulting, project management, testing, training, and documentation.

STEP #4 - MONITOR

You can layer additional services that monitor, measure, track, and secure your network and application performance.

STEP #5 - MANAGE

You can layer preventative care and support services to help reduce emergency calls and enhance overall system stability.
