

# 360° Technology Assessment

## Protect Employees Across Your Organization

### Strategic Technology Roadmap

A 360° Technology Assessment is the first step in ensuring your technology investments support long-term business goals. Our vendor-agnostic assessments provide a clear view of your current operations and recommendations for improvement. For each assessment:

1. A Senior Technical Consultant will analyze your infrastructure using industry-leading tools, physical inspections, and a diverse skill set.
2. A Senior Assessment Staff member will conduct an interview with business stakeholders to: clearly understand current operations, detail how well your IT supports business goals, and measure the impact of new or alternative technologies.
3. We provide a detailed deliverable with recommendations to meet your company's needs.

While many companies provide “free” assessments, we charge a small flat fee for ours. Here's why:

- Our 360° assessment is a high-quality deliverable that outlines the health and welfare of your IT.
- This assessment is a stand-alone engagement that provides an objective evaluation of your current infrastructure, and recommendations for improvement.
- Our assessment the foundation for a strategic technology roadmap for your business. Move your operations forward with confidence, from the get-go.

**Gain Insight Into  
Your Current IT  
Operations**

**Align Technology  
to Meet Business  
Objectives**
